STANDARDS OF LIVING

A standard meal typically costs **♣** 5-50 or more per person, depending on quality and service. A burger of unidentifiable meat-like substances eaten standing up in a fast-food joint may cost just **♣** 2-3; a fine meal at a Colonial Aid Society hostel could cost **♣** 20, while a sybaritic feast of a dozen courses and entertainments costs **♣** 500 or more.

Accommodation for a night in a cheap hotel costs **♣** 10; a good hotel can be found for **♣** 50-250. Luxury hotels start at **♣** 500 per night. Colonial Aid Society hostels is available to members and their guests for **♣** 25 per night.

A Traveller living on board ship is assumed to have their food and lodging taken care of. A Traveller living on a planet or orbital for a long period must spend money on living costs – the amount depends on the quality of life desired. A Traveller who does not live at the standard listed for their SOC risks being embarrassed and perhaps even losing their standing.

LIFE STYLE	BORDER COST/MONTH	CORE COST/MONTH	SUITABLE FOR
Very Poor	♣ 50	♣ 150	SOC 2
Poor	♣ 200	♣ 800	SOC 4
Low	♣ 500	♣ 1.000	SOC 5

COMMON ITEMS

ITEM	DETAILS	TL	COST
Light intensifier goggles	light intensification + Infrared thermal imaging	0	♣ 1.000
Arrash	Strong stimulant with pain-relieving properties. DM-1 to all checks, except END checks.	0	♣ 20
Kambra	Drug that induces a state of euphoria. DM+1 for SOC checks. Lasts a few hours, followed by a bad day of hangover: DM-1 to all checks.	0	♣ 25
Modulator	A communicator based on nanotechnological representation of real objects. Has 10 km range and can both transmit and receive perfect copies of objects. The modulated object is tied to the plate-shaped modulator and cannot be moved, but can be touched and turned as long as it stays above the unit. The copied objects lack the functions of the originals.	A	♣ 20.000
Tabak	Mild stimulant with a sweet taste. Rolled, dried and ground up to be smoked in a hookah. Essential oils are sometimes added for a deeper flavor. In certain parts of the Horizon, it is dried, rolled and smoked directly, or used to brew a bitter and soothing tea.	0	♣ 10
Tag	A crystalline memory stick for information or birr. Charged at a terminal and not personal, which makes it hard to trace unless you know its specific number. Everyone can access it's contents.	0	♣ 25
Transactor	A personal identity card that can hold birr as well as other information. Since it is personal, it is easy to trace (DM+1 Datadjinn if the tracer has access to the correct personal information), but only you can access it's contents (DM-3 to hack).	0	♣ 100
M-dose	A one-use injector for stabilizing wounds or treating poison, disease or radiation damage. One use. Preferably used together with a medkit. Used alone it gives only a DM +1 to the Medicurgy check. When used with a medkit or trauma kit, adds DM +1 to the Medicurgy check in addition to the bonus from the medkit/trauma kit.	0	♣ 100
Medkit	Ordinary bag of medicurgical supplies for treating wounds, poisonings, radiation damage or severe illness. Contains a diagnostic unit, suture gun, pneumatic needles, bandages and other basic gear, as well as 10 m-doses. The medkit gives a DM+1 to Medicurgy.	0	♣ 2.250
M-jector	A medicurgical injector that can be fired with a Vulcan weapon to lend medical assistance from Short range. If target is hit, the injector restores 2 lost characteristic points.	0	♣ 60
Spider doctor	An autonomous field medic unit with a spider-like design. Diagnoses the patient and initiates treatment. It acts independently with a DM of 0. The spider comes with a full trauma kit.	A	♣ 45.000
Trauma Kit	An Advanced version of the medkit. Gives a +2 to all medicurgy rolls. Contains 10 t-doses. Cannot be used without trauma doses.	A	♣ 5.800
T-dose	Advanced version of the m-dose. One use. Preferably used with a trauma kit. Used alone (or with a medkit) it gives only a DM +1 to the Medicurgy check. When used with a trauma kit, adds DM +2 to the Medicurgy check in addition to the bonus from the trauma kit.	A	♣ 250
Anti-Rad	Must be administered before or immediately (within 10 minutes) after radiation exposure. They absorb up to 100 rads per dose. One use. Only one per 24 hours.	0	♣ 800

TECH LEVELS

P (Primitive): Covers a wide range of technology levels, from Stone, Bronze and Iron Age up to early ballistic fire arms. Weapons of this tech level can be found on remote planetside suks, run-down stations and sometimes primitive colonies.

O (Ordinary): The standard tech level in the Third Horizon. Items of this level can be found on most markets and they are normally unrestricted.

O* (Ordinary Restricted): Same as Ordinary, but access is restricted and possession may be against the law.

A (Advanced): State-of-the-art technology, that can only be found in limited areas of the Third Horizon. Most citizens of the Horizon don't ever get to see this kind of technology (and sometimes don't even know if it's existence).

A* (Advanced Restricted): Same as Advanced, but access is restricted and possession may be against the law.

F (Faction Controlled): This technology is under faction control and usually not available outside the faction. Sometimes the open display of this kind of technology can be discriminating.

E (Experimental): The newest, often untested or not yet production-ready technology. Can't be bought in stores or on markets.

ITEM	DETAILS	TL	COST
Cutting Torch	Cell-powered cutting torch. Can cut through ship's hulls and armored doors in a couple of minutes, creating a hole big enough for a person without an exo shell. The cell must be changed before the torch can be used again.	O	▮ 800
Thermal Cutter	A cutting torch with a thermal lance that can cut through ship's hulls, armored doors and similar things in one minute, creating a hole big enough for a person in an exo shell. Powered by three cells that must be changed after each use.	A	▮ 3.000
Vacuum Sealer	The sealer looks like a big injector. It is used to seal up small holes in exos or hulls.	O	▮ 500
Binoculars	Optical aid to scouting at long distances. Gives a DM+1 to checks regarding observation.	P	▮ 100
Chem extinguisher	Neutralizes fire and burning or corrosive chemicals in one turn. The extinguisher can put out one small fire.	P	▮ 300
Environment Scanner	Scans the surroundings and reports any presence of dangerous chemicals, biological threats or radiation. Gives a +2 to survival to spot environmental threats.	O	▮ 500
Hyper Rope	A thin and incredibly strong rope that is 50 meters long. Can be fastened to most materials. Cannot be climbed without special hand and foot grips as the rope cuts like a knife. The grips are included. Gives a +1 to dexterity when climbing.	O	▮ 200
Nutrition Pills	One's daily need of energy and nutrition compressed into three tiny pills, flavored and designed to provide the user with a sense of being full. Must be taken with at least half a liter of water or they will cause serious stomach pains and massive constipation.	A	▮ 250
Survival Mask	Full-face mask connected to an oxygen tank. Recycles exhaled oxygen and lasts for one hour in a completely oxygen-free environment and for one day in low-oxygen surroundings. If the mask absorbs some oxygen from the surrounding atmosphere, harmful substances are filtered out.	O	▮ 500
Thermostatic Suit	A underwear suit that monitors and chemically corrects the wearer's body temperature. No extra energy source is necessary. Works between +70 degrees Celsius and -80 degrees Celsius. Collects the wearer's sweat and urine, purifies it, and fills up an internal compartment with clean water. DM+1 to survival checks.	O	▮ 1.200
Fusion battery	Standardized high capacity energy source. Takes 6 hours to refresh.	O	▮ 125
Filter Mask	Filters are breathing masks that strip out harmful elements from the air inhaled by the Traveller, such as dangerous gases or dust particles.	O	▮ 100
Respirator	This rebreather concentrates inhaled oxygen, allowing a Traveller to breathe on worlds with a thin atmosphere. Respirators take the form of a face mask or mouthpiece initially. A: The advanced respirator is small enough to fit into the nose or can be a lung implant.	O A	▮ 150 ▮ 2.000
Habitat Module	A modular unpressurised quarters for six people, capable of withstanding anything less than hurricane-force winds. Includes survival rations and battery power to last a week.	O	▮ 20.000
Portable Fusion Generator	This is a light-duty portable fusion generator, capable of recharging weapons and other equipment. Come in the form of a backpack weighting about 12kg.	A	▮ 300.000
Grav Belt	Belts and buckles crowned by a pack worn on the back. The belt normalizes the wearer's gravity to 1G. Powered by a fusion battery that lasts for about 24 hours.	A	▮ 16.000

TABULA

A tablet that can be operated by hand or using ornate stylus pens. Everyday object used to gather information, keep a diary or just to read the Bulletin's news.

Often worn as smart bracelet attached to the forearm. Can be enhanced with a wide range of modules.

All tabulas can be controlled either by touch or voice commands. They have data storage capacity large enough to store thousands of hours of music, ten thousands of books, hundreds of hours of video and thousands of high definition photos. The can always function as digital ID and wallet. Additionally they can be used for planetwide communication, be patched into longer range comm arrays, have a simple camera, and a computer with basic software and/or games.

They need an energy cell to function with a capacity of 9 days.

ENCUMBRANCE

Under most circumstances, the referee can simply rule that Travellers can carry a 'reasonable' amount of equipment without actually tracking it – armour, a main weapon, a pistol, a few grenades and items in a backpack are all reasonable.

However, Travellers being who they are, there may be times when they attempt to carry an unreasonable load.

The first thing to consider is how they are actually carrying something. Six modern rifles may not weigh all that much but without a suitable pack or bundle they are not easy to carry for long stretches without dropping one. When Travellers start to carry a lot of items, the referee should step in and ask where or how they are being carried.

Most items of equipment have a list Mass and a referee can also use this to limit what is being carried. A Traveller should be able to carry equipment totalling a number of kilograms equal to their combined STR and END without penalty, plus any levels in Athletics (strength and/or endurance).

Travellers can carry up to twice this amount but will suffer DM-2 on all physical actions while they do so. They will also count as performing heavy labour as detailed under Fatigue on page 80.

The mass of armour is distributed around the body when worn properly, thus reducing its effective weight. You can reduce the mass of armour that is being worn by 75% for the purposes of encumbrance.

ARMOR TYPES

Cloth: A heavy jacket tailored from ballistic cloth. Absorbs impact energy and spreads it over the body, which can result in bruising. However, cloth armour is highly useful and versatile.

Flak: Like Mesh, but made from cheaper plastics. Thus cheaper but less protective.

Mesh: A jacket and leg pads lined with a fine durasteel mesh for protection against bullets.

Padded: Padded cloth armour, looks like normal clothing (and often is).

Reflec: Reflec armour is a flexible plastic suit with layers of reflective material and heat-dispersing gel. It is highly effective against lasers but provides no protection against other attacks.

ARMOR TRAITS

Ablat X: Protection +X against lasers, but protection is reduced by 1 for each laser hit and can't be restored. Ablat imposes DM-1 on any Stealth checks the wearer attempts.

Blunt: Protects only against blunt melee attacks.

Bulky: Gives the wearer a DEX DM -1.

Dressed: Battle dresses support their own weight. While powered and active, the mass of a battle dress does not count against the encumbrance of the wearer and is effectively weightless. An on-board Computer/2 gives tactical advice and updates. All weapons used while wearing battle dress count as having the Scope trait.

Helmet: Includes a sealed helmet perfectly fitted to the armour.

Magnetic boots: The boots of the suit have electromagnets to make them work in zero-G and stick to ship hulls.

Micro servos: Gives a DEX DEM +1 for jumping and running.

Reflec X: Protection +X against lasers. Reflec imposes DM-2 on any Stealth checks the wearer attempts. Can be combined with other armour.

Skill: Some armours have a required skill. A Traveller suffers DM-1 to all checks taken in the armour per missing skill level. Not having the skill at all inflicts the usual DM-3 unskilled penalty instead.

Vacuum: Protects against vacuum and radiation. Eight hours' worth of oxygen supply, in a closed helmet.

Very Bulky: Gives the wearer a DEX DM -2.

SHIELDS

WEAPON	TL	RANGE	DAMAGE	KG	COST	TRAITS
Shield	P	Personal	1D	2	♣ 200	-
Boarding Shield	O	Personal	1D	5	♣ 1.500	Bulky
Expendable Shield	A*	Personal	1D	1	♣ 2.500	-
Riot Shield	O	Personal	1D	1.5	♣ 175	-

ARMOR OPTIONS

Built-in weapon (O): The armor has a built-in weapon – a pistol, dagger or short sword. The weapon must be purchased separately.

Chameleon, IR (A*): This technology can be added to any full-body suit. It selectively bleeds heat to match background infrared levels and effectively renders the wearer invisible to infrared detection (DM-4 to detect with sensors). IR chameleon costs ♣ 5.000.

Chameleon, Vislight (A*): A more advanced form of IR chameleon, vislight chameleon layers the surface of the armour with light-bending technology, making the wearer nearly invisible to the naked eye (DM-4 to spot). Vislight chameleon costs ♣ 50.000.

Computer Weave (O): Computer weave can be added to any armour that does not already have a computer system and adds a Computer/0 to that armour. Costs ♣ 500.

A: Advanced computer weave adds Computer/1. Costs ♣ 1.000.

E: Experimental computer weave adds Computer/2. Costs ♣ 5.000.

Extended Life Support (A): This upgrade can be added to any suit that provides life support (vacc suit, HEV suit, combat armour, battle dress). By adding high-pressure oxygen tanks and recycling, the suit now provides 18 hours of oxygen. Costs ♣ 10.000.

Eye Protection (O): A lot of armour includes eye protection such as visors to guard against flying debris. Such protection becomes absolutely vital against the blinding effects of lasers. Eye protection can be added to any armour. Costs ♣ 50.

Grav Assist (A): This upgrade can be added to combat armour or battle dress only and adds the functionality of a grav belt to the

armour at the cost of ♣ 20.000.

Helmet (O): All armour with the Vacuum trait come with a helmet. If you want to wear one independent of a vacc suit, you can by one to raise protection by +1. Weight: 1kg. Costs ♣ 150.

A: Better protection of +2. Costs ♣ 280.

Magnetic Boots (O): Magnetic plates in the boots of the armour allow the user to walk normally on a spacecraft without artificial gravity. Costs ♣ 100.

Medikit (O): An internal medical scanner and drug injector, the medikit can be installed in combat armour, battle dress or a vacc suit. It automatically applies first aid if the Traveller is reduced to END 0 (treat as having Medicurgy 3). It can also administer a M-dose on command (stores 3 M-doses). Costs ♣ 5.000.

A*: A military medikit can also inject combat drugs and metabolic accelerators on command. Costs ♣ 10.000.

Self-Sealing (A): Self-sealing systems can be added to any armour (except ablat) when it is being made. The armour can seal breaches and repair minor damage. This cannot reconstruct a severely damaged suit of armour but does ensure that a ripped vacc suit or torn jacket repairs itself. Self-sealing only repairs minor damage – getting shot or stabbed is about the limit of the self-sealing capability to manage. Self-sealing costs ♣ 2.000.

Smart Fabric (A): Smart fabric resists stains and dirt, cleaning itself automatically, sloughing off dirt, dust and mud (this function can be suspended for the purposes of camouflage). Adding smart fabric costs ♣ 1.000.

Thruster Pack (O): A simple thruster pack gives the user the ability to manoeuvre in zero-gravity over short distances. A Athletics [dexterity] check is required to use it accurately. Thruster packs can only be used in zero-g or microgravity environments. Can be added to Vacc Suit requiring armour. Lasts 4 hours, using standard starship fuel. Weights 20kg. A thruster pack costs ♣ 3.500.

A: The long-range thruster pack gives better acceleration for up to 24 hours. Weights 14kg. This costs ♣ 14.000.

F: This version of the long-range pack is much smaller and lasts up to 1 week, as it uses grav-thruster plates. Powered by a power cell. Weights 6kg. This costs ♣ 40.000.

ARMOUR QUALITY

QUALITY	COST	RULES
2nd Hand or Worn down	50%	Protection -1
Standard	100%	-
Fine Quality	150%	Protection +10% (rounded up)
Ornamented Quality	200%	Protection +10% (rounded up) DM+2 on social interactions

WEAPON TRAITS

AP X: This weapon has the ability to punch through armour through the use of specially shaped ammunition or high technology. It will ignore an amount of Protection equal to the AP score listed. Spacecraft scale targets ignore the AP trait unless the weapon making the attack is also Spacecraft scale.

Artillery: Artillery weapons shoot projectiles along a ballistic trajectory, allowing them to 'lob' shots at targets out of sight. When firing at a target that can be seen, Artillery weapons follow the usual rules for ranged attacks.

When attempting indirect fire at a target that cannot be physically seen, the attack suffers a DM-2 penalty.

In addition, if the precise location of the targets is not known (enemies are behind a wall or have ducked down into a trench, for example) the attack will land 1D metres in a random direction away from them for every 100 metres the target is from the attacker, minus the Effect of the attack roll. A negative Effect will, of course, add to this distance instead. It is worth remembering that knowing where targets may be does not mean they need to be seen.

Auto X: These weapons fire multiple rounds with every pull of the trigger, filling the air with a hail of fire. A weapon with the Auto trait can make attacks in three fire modes: single, burst and full auto. Attacks using the Auto trait lose any benefits gained from aiming.

Single: Attacks are made using the normal combat rules.

Burst: Add the Auto score to damage. This uses a number of rounds equal to the Auto score.

Full Auto: Make a number of attacks equal to the Auto score. These attacks can be made against separate targets so long as they are all within six metres of one another. Full auto uses a number of rounds equal to three times the Auto score.

A weapon cannot use the Auto trait in the same action as the Scope trait or an aiming action.

Blast X: This weapon has an explosive component or is otherwise able to affect targets spread across a wide area. Upon a successful attack, damage is rolled against every target within the weapon's Blast score in metres. Dodge Reactions may not be made against a Blast weapon but targets may dive for cover. Cover may be taken advantage of if it lies between a target and the centre of the weapon's Blast.

Bulky: A Bulky weapon has a powerful recoil or is simply extremely heavy – this makes it difficult to use effectively in combat by someone of a weak physical stature. A Traveller using a Bulky weapon must have STR 9 or higher to use it without penalty. Otherwise, all attack rolls will have a negative DM equal to the difference between their STR DM and +1.

Cursed: Cursed weapons gain a malus of DM -1.

Dangerous: This weapon can be as lethal to its user as the intended target. If an attack roll is made by this weapon with Effect -5 or worse, it explodes. Its damage is inflicted upon the person firing it and the weapon is rendered inoperable.

Destructive Weapons: Some weapons are so powerful, they are capable of blasting apart small vehicles with a single shot. Such weapons are referred to as being Destructive. A Destructive weapon is noted in its Damage score with two Ds (for example, if a weapon was listed as having Damage 3DD, it would be Destructive, rolling three dice for damage). A Destructive weapon multiplies the total rolled for Damage by 10. Effect is never added to the damage of a Destructive weapon.

Fire: This weapon sets a target on fire, causing damage every round after the initial attack. A target can only be set on fire by one Fire weapon at a time – use the highest damage Fire weapon. A fire will extinguish itself on a 2D roll of 8+, rolled at the start of every round. However, the Referee may rule it continues to burn so long as flammable material is present. A Traveller may use a Significant Action to extinguish the fire, requiring an 8+ DEX check. The Traveller gains DM+2 if using firefighting equipment.

Grape: DM+1 when using this weapon.

Holy: Holy weapons are blessed and usually of fine quality. They gain a bonus of DM +1.

Loud: The weapon is unusually loud being used. Any attempts to detect the source of the sound of this weapon gains DM+2.

Low Capacity: If one or more 1s are rolled during a check with this weapon, the ammo has run out or the weapon is jammed.

Mercurium: means that the blade of the weapon is hidden inside the hilt, requiring an observation test with DM -2 to spot during a search.

Meson: Completely ignore Armour/Cover. Takes one action to re-adjust after each use. DM -3 to hit with a Meson weapon.

One Use: This weapon is designed to be used just once, completely expending its energy or ammunition and then being rendered useless.

Radiation: When a Radiation weapon is fired, the target will receive 2D x 20 rads. If the Radiation weapon is Destructive, every target within 10 metres will also receive 2D x 20 rads.

Scope: The weapon has been fitted with vision-enhancing sights, allowing it to put shots on target from far greater ranges. A weapon with the Scope trait ignores the rule that limits all attacks made at a range greater than 100 metres are automatically treated as being at Extreme range, so long as the Traveller aims before shooting.

Silent: Most projectile weapons require a noisy discharge of chemical, heat or kinetic energy in order to attack but this weapon channels or removes the excess sound energy also created. Any attempts to detect the source of this sound suffer DM-6.

Slow: Slow weapons can only be fired every other turn.

Smart: This weapon has intelligent or semi-intelligent rounds able to guide themselves to a target. They gain a DM to their attack rolls equal to the difference between their TL and that of the target (usually their armour or vehicle, although Smart weapons can also home in on communications devices, computers and weapons): P-0, O-A, A-E: +1 | P-A, O-E: +3 | P-E: +5

Smasher: This weapon is particularly heavy and carries a great deal of momentum when it is swung. A Traveller attacked by a Smasher weapon may not attempt to parry it.

Stun: These weapons are designed to deal non-lethal damage, incapacitating a living target rather than killing it. Damage is only deducted from END, taking into account any Protection. If the target's END is reduced to 0, the target will be incapacitated and unable to perform any actions for a number of rounds by which the damage exceeded their END. Damage received from Stun weapons is completely healed by one hour of rest.

Very Bulky: Some weapons are designed only for the strongest combatants. A Traveller using a Very Bulky weapon must have STR 12 or higher to use it without penalty. Otherwise, all attack rolls will have a negative DM equal to the difference between their STR DM and +2.

Very Dangerous: Only a madman uses a weapon with this reputation. If an attack roll is made with Effect -3 or worse, it explodes. Damage is inflicted upon the person firing it and the weapon is rendered inoperable.

Zero-G: This weapon has little or no recoil, allowing it to be used in low or zero gravity situations without requiring an Athletics (dexterity) check.

BALLISTIC RANGED WEAPONS

Rarely used by space-farers as they can't function in vacuum, except when using expensive special bullets, these resemble the old form of guns and rifles. Many planet dwellers still favor these weapons for their reliability and easy maintenance. Both the weapon and its ammunition are affordable and easy to come by planetside.

ACCELERATOR RANGED WEAPONS

Accelerator weapons utilize magnetic acceleration of tiny projectiles or needles. They are almost recoil-free, but their low rate of fire limits their military use. Thanks to their excellent precision however, they are popular with colonists, hunters and sharpshooters. The Zenithian Hegemony favors accelerator guns over Vulcans just for the sake of precision. Some accelerator weapons have a "silent" mode, but this limits their capability to pierce armor. Accelerator weapons are hard to copy, unlike Vulcans.

VULCAN RANGED WEAPONS

Vulcan weapons fire tiny rockets with explosive heads. Firing and reloading is mechanical and the weapons require no cells. Vulcan weapons have a low recoil to enable steady automatic fire. As they are easily pirated, they are common everywhere in the Horizon, and so is the ammunition. Partisans, rebels, and explorers all use Vulcan weapons, often adorned with mythological or traditional images and patterns.

THERMAL RANGED WEAPONS

Thermal weapons fire a slug of superheated matter towards their target. This process requires huge amounts of energy, which means that some thermal weapons even require fusion batteries. The adapter between the battery and the weapon is heavy and cumbersome, and the battery itself must be carried as a backpack. The weapon still requires a magazine as hydrogen is needed for the actual shot. Heavy weapons are exceptions to this as they instead use big cassettes that are magazine and battery combined into one.

GRAPE RANGED WEAPONS

These weapons use bullet called “grapes”, tiny pieces of metal that expand in a cloud when the weapon is fired, which makes aiming less important. The generous spread of the grapes plus the impressive damage it can cause in close combat makes the grape gun a very imposing and yet cheap weapon.

WEAPON	TL	RANGE	DAMAGE	KG	COST	MAGAZINE	MAG. COST	TRAITS

MESON RANGED WEAPONS

There are luckily only a few meson weapons not under Draconite control. Meson technology is based on controlled particle decay, where a ray is sent against a target and made to decay inside it, causing high-energy detonations. To achieve a good hit, the range to the target must be carefully adjusted. Powerful cells power the weapon and require frequent reloads.

LASER RANGED WEAPONS

Laser weapons are sleek and energy-hungry. They channel coherent light through crystal-focused emitters and carefully tuned lenses. Rather than brute-force destruction, lasers excel at precision. Their reliance on power cells and delicate optics makes them symbols of high technology and wealth, often associated with Zenithian engineering.

PLASMA RANGED WEAPONS

Plasma weapons are brutal expressions of controlled chaos: magnetic bottles briefly caging superheated matter before hurling it toward the target in incandescent bolts. Plasma annihilates—melting armor, igniting bulkheads, and turning confined spaces into hellish furnaces. These weapons are notoriously unstable, demanding sophisticated containment fields and constant maintenance.

WEAPON	TL	RANGE	DAMAGE	KG	COST	MAGAZINE	MAG. COST	TRAITS

Plasma Launcher	E*	Long	2DD	8	♣ 100.000	-	-	One Shot, Smart, Very Bulky, Zero-G

FUSION RANGED WEAPONS

The ultimate personal firearm, the Fusion Gun, is more like a piece of artillery. Includes gravity suspension systems to reduce its inertia and fires what amounts to a directed nuclear explosion.

WEAPON	TL	RANGE	DAMAGE	KG	COST	MAGAZINE	MAG. COST	TRAITS
Fusion Gun	F*	Long	2DD	12	♣ 100.000	-	-	Very Bulky, Radiation
Heavy Fusion Gun	F*	Long	2DD	6	♣ 400.000	-	-	Bulky, Radiation

GAUSS RANGED WEAPONS

Gauss weapons represent cold, uncompromising engineering: electromagnetic rails accelerating dense metal projectiles to hypersonic speeds with a thunderous crack. Gauss weapons are rugged, reliable, and brutally pragmatic, favored by soldiers, mercenaries, and ship crews who trust physics more than volatile energy fields.

WEAPON	TL	RANGE	DAMAGE	KG	COST	MAGAZINE	MAG. COST	TRAITS

Gauss Submachine Gun	A*	Long	3D+2	3	♣ 1.000	60	♣ 60	AP 3, Auto 4, Zero-G, Loud

FUSILLARD RANGED WEAPONS

Cheap weapons, that are easy to mass-produce. They shoot ballistic slugs or grapes propelled by fast expanding chemicals, just like traditional ballistic weapons. Fusillard guns tend to sometimes jam and are very loud. Yet they are used all over the Horizon.

WEAPON	TL	RANGE	DAMAGE	KG	COST	MAGAZINE	MAG. COST	TRAITS

FINELY MADE WEAPONS

A Traveller may not be satisfied with the quality of mass-produced weapons. Superior workmanship can produce enhanced designs but these products are hard to come by and are only available at a considerable premium. These weapons could be either limited run and/ or premium commercial models, or custom versions built by a highly skilled weaponsmith.

A Referee may choose to allow the purchase of finely made weapons and set an Availability DM. A finely made weapon can have one of the following advantages:

- **Accurate:** This weapon provides DM+1 to attack rolls.
- **Deadly:** When determining damage from this weapon all dice which roll a 1 or 2 are treated as a 3.
- **Long Range:** The Range of this weapon is increased by 50%.

Each of these advantages increases the cost of the weapon by D3+1 times standard costs. The Referee may allow weapons with more than one advantage but the cost for each additional feature is multiplied by the others.

LOW QUALITY WEAPONS

Sometimes there are just not enough birr to pay for the weapon of your choice. Fear not, as there are always cheap second hand weapons available on any souk or station market. Reduce the cost of the weapon by 20% for each quirk. A weapon can have a maximum of 2 quirks.

1D QUIRK

- 1 The Weapons gains the **Dangerous** trait. If it already has this trait, it becomes **Very Dangerous**.
- 2 The Weapons gains the **Low capacity** trait. If it already has this trait, it jams if a 2 shows up on the check roll too.
- 3 The Weapons gains the **Slow** trait. If it already has this trait, nothing is added to the weapon.
- 4 The Weapons gains the **Cursed** trait. If it already has this trait, nothing is added to the weapon.
- 5 The Weapons gains the **Loud** trait. If it already has this trait, nothing is added to the weapon.
- 6 No quirk is added to the weapon.

AUGMENT DEFINITION

While technology is capable of significantly altering and improving the body, obvious cybernetic, genetic or surgical alteration of the human form is frowned upon in many universes.

Most of the items in this category can be cybernetic (mechanical or electronic implants and prostheses) or biological (genetic engineering and surgical alteration) or both (a more common solution) but the general term of 'augment' is used for all of them.

INSTALLING AUGMENTS

The installation of any augments into a Traveller requires surgery, often very extensive surgery. It is assumed that any reputable augments dealer the Traveller visits will have access to first class hospital services (this will not apply if the Traveller visits a back street or illegal dealer) and so there will be no actual danger in the process. However, it will take time; typically 1D weeks.

AUGMENT OPTIONS

Invisitech: The augment is made from materials which will not trigger an alert on a scanner, sensor or mechanostatic listener. Other than medical examination or direct visual contact with the augment, there is no electronic way to sense its presence. The augment becomes detectable by electronic scanners. Cost is raised by 100%.

Natural looking: Adding a layer of synthetic skin and hair over a cybernetic augment can help make it seem more organic and lifelike at a passing glance. This helps the augment blend in with the rest of the Traveller's body, granting DM+2 to all Deception checks made to hide the augment. Cost raised by 25%.

Self-healing: The augment comes standard with a self-repair mechanism, using nanites, protein coating or some other method. Instead of requiring special attention by a cyberdoc, geneticist or bionicist, the augment heals like any other part of the body when damaged. Cost raised by 100%.

Ruggedised: All circuitry and electronic components in the augment have been shielded against outside energies. This makes the augment immune to energy-based weaponry that targets augments and weapons that have adverse effects based on cybernetic augments such as electromagnetic pulse grenades or ion weapons. Cost raised by 25%.
